edgarasneverdauskas.com · linkedin.com/in/edgarasneverdauskas · github.com/Evirtual

Product Engineer with 10+ years of software-development experience spanning product development, UI/UX, modern frontend architecture, Web3/DeFi and AI-enabled products. Experienced in taking ideas from concept to working product — shaping product direction and user experience while owning technical decisions, implementation and delivery, across both hands-on development and advisory work.

PROFESSIONAL EXPERIENCE

2025 — Present

Independent Product Engineer

Remote

- Build and ship independent software products across AI, data, Web3 and consumer technology, owning architecture, implementation, testing and deployment from concept to working product.
- Use OpenAI Codex and Claude Code extensively as engineering accelerators while retaining responsibility for product direction, architecture, review, debugging and final quality.

Products: CSS 3D Lab, J.A.R.V.I.S., Timeline, Ampuno, Self-Aware Writing, @unicorn, Bitcoin Analytics, Social Blockchain Network

2022 — 2026

Frontend Engineer · Web3 / DeFi

Cambodia · Remote

Fetch Oracle

2023 — 2026

Cambodia · Remote

- Principal frontend contributor to the Fetch Oracle dashboard: oracle reporting, staking and reporting APR, disputes, voting, rewards and wallet/account state against live on-chain data.
- Testnet and configuration migration work, developer-facing integration material and production debugging; contracts and backend were owned elsewhere.

LiquidLoans

2022 — 2026

Cambodia · Remote

- Built and maintained React/TypeScript DeFi interfaces spanning borrowing, Stability Pool, staking, farming, redemptions and liquidations, with wallet integration, ERC-20 balances and transaction-state handling.
- Used wagmi, ethers and GraphQL/subgraphs to power financial dashboards from on-chain data, investigating RPC limits and chain-sync issues; contributed to deployments across multiple networks, including PulseChain. Frontend within an existing team; protocol design, contracts and backend were owned elsewhere.

2015 — 2022

Frontend Developer

United Kingdom · Cambodia

Clik

2021 — 2022

Cambodia

- Brought in on the design side before moving into frontend development — React, JavaScript and HTML/CSS, building and maintaining responsive product interfaces.

Brave Agency, Zazzle Media, e4education

2015 — 2021

United Kingdom

- Agency and in-house frontend work — JavaScript and HTML/CSS, plus WordPress and PHP builds for client websites and web platforms, taken from design handoff through to production.

SELECTED PRODUCTS

CSS 3D Lab · Independent Product Engineer

Since 2026

- Free, growing gallery of 3D models built with CSS, each live beside a step-by-step explanation and editable copy-paste code.
- Vite/TypeScript/Sass; pixel-measured sizing, a Playwright QA pass on every model, share images and videos filmed at build.

J.A.R.V.I.S. · Independent Product Engineer

Since 2026

- Iron Man–style voice assistant with a HUD of the machine's real readings; every subject runs as a thread on a board.
- Answered by Gemini or ChatGPT with the user's own key, kept on the device; one back end shared by the PC app and the web version.

Timeline · Independent Product Engineer

Since 2026

- Comparative timeline with organisations as rows on a shared quarterly axis: who shipped what in the same quarter.
- Weighted events and folded quiet stretches keep a decade readable; every event has a dated source URL a script re-verifies.

Ampuno · Founder & Product Engineer

Since 2026

- Normalizes 231 vehicle models and 1,105 variants from OpenEV Data into one validated schema, with no guessed values.
- Next.js static model and trim pages, a zod layer over raw data, Vitest and Playwright on search, filtering and comparison.

Self-Aware Writing · Author & Product Engineer

Since 2026

- A living book built with its software: an Astro/TypeScript site where a chapter is one Markdown file, with custom remark plugins.
- Reader state in localStorage, no accounts or analytics; 75 Playwright tests and a consistency checker that fails CI on contradictions.

@unicorn · Founder & Product Engineer

Since 2021

- Consumer social product in continuous iteration since 2021: authentication, profiles, posts and media upload.
- Years of progressive modernization, then a full TypeScript and Tailwind rewrite in 2026, with unit and browser tests.

Bitcoin Analytics · Independent Product Engineer

Since 2025

- React/TypeScript/Vite dashboard for BTC market data: returns, volatility, drawdowns, moving averages, heatmap and Fear & Greed.
- Coinbase/Kraken fallback with per-source backoff so an outage degrades one card; wrapped-BTC balances across Ethereum, Base and BSC.

Social Blockchain Network · Independent Product Engineer

Since 2025

- Social product where every write is a signed transaction: posts minted as NFTs, likes, comments, follows and tips on chain.
- Wrote the SocialPosts Solidity contract and Hardhat tests; in-browser media cropping and ffmpeg.wasm trimming, stored on IPFS.

TOOLKIT

Frontend: React, Next.js, Astro, TypeScript, JavaScript, Vite, Vue, HTML, CSS / Sass, Responsive design, Component architecture

Web3 / DeFi: ethers, wagmi, Wallet integrations, ERC-20, DeFi flows, GraphQL, Apollo, Subgraphs, On-chain data, Oracle workflows

AI / Product: OpenAI Codex, Claude Code, OpenAI APIs, Vision workflows, AI-assisted engineering, Rapid prototyping, Product development

Quality / Delivery: Vitest, Jest, Playwright, Git, GitHub Actions, REST APIs, Debugging, SEO / metadata, GA4, Firebase, Cloudflare / Wrangler, GitHub Pages

LANGUAGES

Lithuanian: Native · **English:** Fluent — full professional proficiency
