

Edgaras Neverdauskas

Product Engineer

Kampot, Cambodia · contact@edgarasneverdauskas.com · +855 81 680 954
edgarasneverdauskas.com · linkedin.com/in/edgarasneverdauskas · github.com/Evirtual

Product Engineer with 10+ years of software-development experience spanning product development, UI/UX, modern frontend architecture, Web3/DeFi and AI-enabled products. Experienced in taking ideas from concept to working product — shaping product direction and user experience while owning technical decisions, implementation and delivery, across both hands-on development and advisory work.

PROFESSIONAL EXPERIENCE

2025 — 2026

Independent Product Engineer · [Self-employed](#)

Remote

- Build and ship independent software products across AI, data, Web3 and consumer technology, owning architecture, implementation, testing and deployment from concept to working product.
- Use OpenAI Codex and Claude Code extensively as engineering accelerators while retaining responsibility for product direction, architecture, review, debugging and final quality.

2023 — 2026

Frontend Engineer · [Fetch Oracle](#)

Cambodia · Remote

- Principal frontend contributor to the Fetch Oracle dashboard: oracle reporting, staking and reporting APR, disputes, voting, rewards and wallet/account state against live on-chain data.
- Testnet and configuration migration work, developer-facing integration material and production debugging; contracts and backend were owned elsewhere.

2022 — 2026

Frontend Engineer · [LiquidLoans](#)

Cambodia · Remote

- Built and maintained React/TypeScript DeFi interfaces spanning borrowing, Stability Pool, staking, farming, redemptions and liquidations, with wallet integration, ERC-20 balances and transaction-state handling.
- Used wagmi, ethers and GraphQL/subgraphs to power financial dashboards from on-chain data, investigating RPC limits and chain-sync issues; contributed to deployments across multiple networks, including PulseChain. Frontend within an existing team; protocol design, contracts and backend were owned elsewhere.

2022 — 2026

Founder & Product Engineer · [@unicorn](#)

Remote

- Founded and ran a consumer social product over four years, owning product direction, UX and application architecture through several platform iterations.

2021 — 2022

Frontend Developer · [Clik](#)

Cambodia

- Brought in on the design side before moving into frontend development — React, JavaScript and HTML/CSS, building and maintaining responsive product interfaces.

2015 — 2021

Frontend Developer · [Brave Agency](#), [Zazzle Media](#), [e4education](#)

United Kingdom

- Agency and in-house frontend work — JavaScript and HTML/CSS, plus WordPress and PHP builds for client websites and web platforms, taken from design handoff through to production.

SELECTED PRODUCTS

Timeline · Independent Product Engineer

Since 2026

- A comparative timeline where organisations are rows on a shared quarterly axis, so one column shows who shipped what in the same three months — the view a per-company chronology cannot give.
- Weighted events and folded-up quiet stretches keep a decade of dense releases readable; every event carries a day-precise date and a source URL the schema requires and a script re-verifies.

Ampuno · Founder & Product Engineer

Since 2026

- Normalizes 231 vehicle models and 1,105 variants from inconsistent multi-source specification data into a single validated schema.
- Next.js App Router with static generation for model and trim pages, a zod validation layer between raw source data and the rendered catalogue, and Vitest plus Playwright covering data correctness and search, filtering and comparison flows.

Self-Aware Writing · Author & Product Engineer

Since 2026

- A living book built as one artifact with its software: an Astro/TypeScript site where a chapter is one Markdown file, with custom remark/rehype plugins for stanza breaks and in-chapter page splitting.
- Reader state — progress, resume, theme, two reading modes — is held in localStorage with no accounts or analytics; 75 Playwright tests run across desktop, mobile and Safari, and a self-consistency checker fails CI when chapters contradict each other.

@unicorn · Founder & Product Engineer

Since 2022

- Long-running consumer social product in continuous iteration since 2022, spanning authentication, profiles, posts and media upload flows.
- Progressive modernization of the stack rather than a disruptive rewrite, sharing application logic between web and native-leaning surfaces via React Native Web.

Bitcoin Analytics · Independent Product Engineer

Since 2025

- React + TypeScript + Vite dashboard for BTC market data: returns, volatility, drawdowns, moving averages, price bands, a returns heatmap and volume across 1D/1W/1M ranges, plus Fear & Greed market mood.
- Coinbase/Kraken provider fallback with per-source backoff so an outage degrades one card rather than the page; wallet-connected multichain wrapped-Bitcoin balances across Ethereum, Base and BSC, with cost basis held in the browser.

Social Blockchain Network · Independent Product Engineer

Since 2025

- A social product where every write is a signed transaction: posts minted as NFTs, and likes, comments, saves, follows and tips settling on chain across Base Sepolia, Ethereum Sepolia and BSC Testnet.
- Wrote the SocialPosts Solidity contract and its Hardhat test suite; media prepared in-browser with image cropping and ffmpeg.wasm video trimming, stored on IPFS, with subgraph reads falling back to raw event logs per chain.

TOOLKIT

Frontend: React, Next.js, Astro, TypeScript, JavaScript, Vite, Vue, HTML, CSS / Sass, Responsive design, Component architecture

Web3 / DeFi: ethers, wagmi, Wallet integrations, ERC-20, DeFi flows, GraphQL, Apollo, Subgraphs, On-chain data, Oracle workflows

AI / Product: OpenAI Codex, Claude Code, OpenAI APIs, Vision workflows, AI-assisted engineering, Rapid prototyping, Product development

Quality / Delivery: Vitest, Jest, Playwright, Git, GitHub Actions, REST APIs, Debugging, SEO / metadata, GA4, Firebase, Cloudflare / Wrangler, GitHub Pages

LANGUAGES

Lithuanian: Native · **English:** Fluent — full professional proficiency
